### 1 What is Zenodo?

Zenodo is a general-purpose open-access repository operated by CERN, where researchers can deposit research papers, datasets, research software, reports, and any other research related digital artifacts. For each submission, a persistent *digital object identifier* (DOI) is minted, which makes the stored items easily citeable.

It has a webpage very well *self-documented*, with detailed information about the operation and a complete help guide with FAQ, as well as a field to contact with them.

### 2 How to upload software?

A very clean way to upload software is to develop it in [GitHub](#), create a release and then publish it in Zenodo.
